SPECIALIZED LIBRARY PROGRAM APPS

G4 IS TABLET AND SMART DEVICE COMPATIBLE:

Add one of these mobile APP's to your Smart Device:

As this is a remote application interface for running the G4 Management Program on these devices.

Tablet and Smart Device - software

- ✓ **Android Tablet RDP** (Remote Desktop Client) APP – is [XTRALOGIC, INC.](#) or [2X](#) at the Google Play Store Cost is Free.
- ✓ **Ipad Tablet RDP** (Remote Desktop Client) APP – product called [RDP Itap Mobile](#) (Remote Desktop for Windows) Cost: \$11.99

TEACHERS APP: INTEGRATED DIRECTLY WITH THE G4 LIBRARY SYSTEM

This specific application is designed to empower teachers to interactively use the library from their Classroom. Through any computer or Portable Smart device teachers can manage, set and monitor student reading levels and goals. Teachers can add notes to display directly within the library circulation screen to notify the library regarding what the teacher wants the librarian to be made aware of or special instructions, reading likes and dislikes of the student.

Teachers can create, edit and maintain student reading progression with complete control with an interactive management control that adjusts the library system Reading Level of their students, Grades/Groups and by Period. Updating and Editing is very simple and is designed to reduce time spent needlessly.

Teachers can setup the Reading Level Range; enforce reading so when a book is checked out it is within the students/readers required range.

When students have chosen an item to read that is not within the designated Reading Level range the G4 program warns the library staff of the variance. We do not want to discourage the student; this App offers and presents alternatives (should they exist within the MARC record) of library materials by Genre, Subject and Author to the reader's original choice.

Using a Tablet or Laptop computer, teachers can actually bring their students to the library and help to circulate materials using their portable device or work from the classroom to renew materials, check-in items, or checkout items from one student to another.

This program requires no software to be installed making this App one of the most versatile and powerful Reading management programs available to assist teachers in having more time with their students and less time dealing with paperwork.

=====

Contact LRMS for further information.

TEXTBOOK CIRCULATION APP: INTEGRATED DIRECTLY WITH THE G4 LIBRARY SYSTEM

This application is designed to provide mobile circulation of Textbook materials by using wireless network connectivity, the Internet a laptop computer, any Tablet system or smart device. Circulate textbooks from any location to staff or students for a predetermined circulation period or adjust the circulation period as needed.

Because Textbook materials is cataloged and contained within the library program as a collection having special circulation codes are assigned allows for controlled circulation. Student and Teacher materials are easily checked out or checked in and tracked using this Textbook APP. No software is required to be added to any device, simple hyperlink connectivity.

TECHNOLOGY APP: INTEGRATED DIRECTLY WITH THE G4 LIBRARY SYSTEM

This application is designed to provide mobile circulation of Technology materials such as ipads, Tablet computers, Classroom materials – Smart boards, etc.. Circulate materials to Students, Teachers or any location such as Classrooms by using wireless network connectivity, the Internet a laptop computer, any Tablet system or smart device. Circulate materials from any location to staff or students for a predetermined circulation period or adjust the circulation period as needed.

Because the Technology data is cataloged and maintained within the library program as a collection having special circulation codes assigned to the various types of materials. Student and Teacher materials are easily checked out or checked in and tracked using this Technology APP. No software is required to be added to any device, simple hyperlink connectivity.

All G4 Integrated APPS are available and licensed as a:
